

BEE-MEN PREPARE
WINTER QUARTERS

With a rather light crop of honey reported in most instances this year, most beekeepers in the County are preparing their colonies very carefully for the winter period. The most successful bee-men find that about twenty-five pounds of honey is required to carry the bees over the winter and spring. This is the amount that is contained in several standard Hoffman frames, colonies having less than this amount after the fall honey flow over are fed with either sugar syrup or honey from a healthy colony, according to advice from E. Phillips, extension bee specialist at the Pennsylvania State College.

A mixture of two and one-half parts of white granulated sugar to one part of water, heated until all the sugar is dissolved, has been found very satisfactory for fall feeding. The syrup is fed warm and in the evening to prevent robbing.

For winter protection, the practice of placing the colonies in boxes or packing cases has been followed with good results. A space between the hive and the box is filled with chaff, straw shavings or other fine material. A very convenient pack-

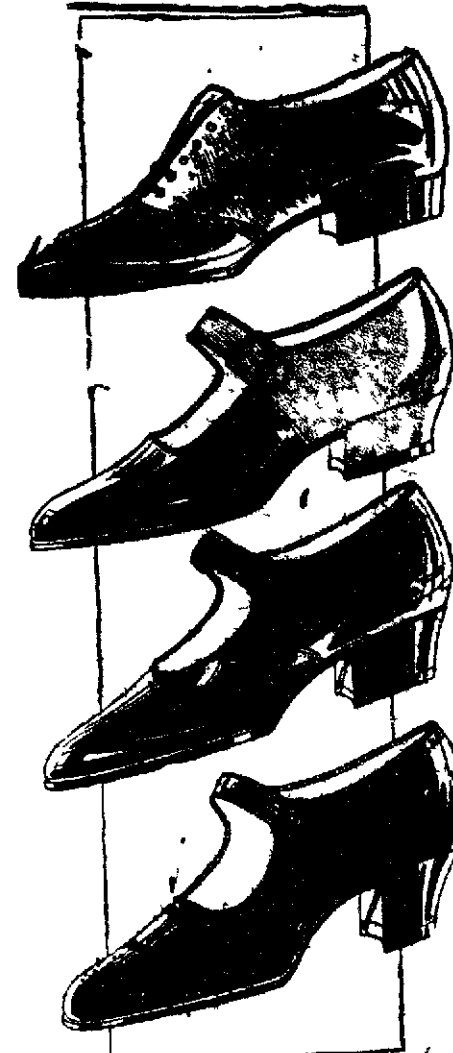

Scene from Act Three, "HONEYMOON HOUSE," With That Inimitable Comedian, JACK NORWORTH, Which Comes to The Driggs Theatre for One Night Only, FRIDAY, OCTOBER 12.

ing case providing protection for four colonies in one unit is described in Farmers' Bulletin 1012 on "The Preparation of Bees for Outdoor Wintering." It may be obtained from the County Agent or from the United States Department of Agriculture.

Veteran beekeepers state that

nothing is gained and much may be lost by delaying the packing for winter after the honey flow has stopped in the fall. This generally occurs between the first and middle of October when the brood rearing has ceased and the active season is ended.

LYTLE BROS.

CLEARFIELD, PA.

LEWISTOWN, PA.

To women who
must be careful-

HOW disheartening it is to find that the scales are correct; that one really weighs a few pounds more—those few pounds that make such a difference in one's whole appearance!

But you can reduce—without hunger or discomfort.

Be careful to avoid wheat breads and other fattening breadstuffs. Instead, make these delicious "Slim-Jane Biscuits" and "Slim-Jane Muffins", making them yourself, so that you know they have the minimum of fuel value. Why not try them today?

NOTE: And try beating a pint of evaporated milk into a pound of butter, substituting it for rich whole butter. It tastes good and will not increase your weight.

"Slim-Jane Biscuits"

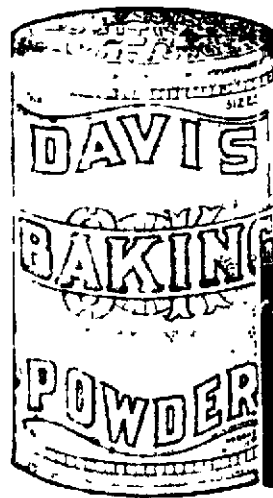

2 c. graham flour 2 tb. shortening
4 ts. Davis Baking Powder 1/2 to 1 c. skimmed milk
1/4 ts. salt

Thoroughly mix the Davis Baking Powder and salt with the flour, rub in the shortening with finger tips, or cut in with knife, gradually add the milk, mixing lightly. On floured board, roll to 1/4" thickness, shape with cutter and bake in hot oven 12 to 15 minutes.

"Slim-Jane Muffins"

2 c. clean bran 1/2 c. sweetening (molasses preferred)
1 c. whole wheat flour 1 1/2 c. skimmed milk
3 ts. Davis Baking Powder 1 egg-beaten
1 ts. salt 1/4 lb. melted shortening

Mix in order given, sift flour, Davis Baking Powder and salt together. Bake in hot oven (400° F) 20 to 25 minutes, in greased muffin tins.

Bake it BEST with

DAVIS
BAKING POWDER

Entered as Second Class Matter, October 10, 1922, at Clearfield, Pa., Post Office at Clearfield, Pa., as second class mail matter.

"Horsepower" is a word loosely used, but conveys the general idea that an engine of a given horsepower is capable of moving as heavy a load as a given number of horses.

Nothing is further from the truth, according to experiments made with an invention called the horse and mule dynamometer, devised by Prof. E. V. Collins, of the experimental engineering section of the Iowa State College of Agriculture and Experiment Station, at Ames, Ia.

If race and mule pulling contests were held recently at the Iowa State Fair and the teams tested developed all the way from 8.6 to 21.2 horsepower and exerted from 2000 to 2300 pounds tractive pull. The tests were the first of the sort ever made in the world. Horsemen who were present pointed out that Prof. Collins' invention would be of supreme importance in developing strains according to the pulling ability of sires.

Teams in the tests which developed a 2300 pound tractive pull exerted power enough to start and pull twenty-four tons of coal over a level track pavement of enough to pull six tons of coal over a similar track if once the loads were started.

With the Collins dynamometer, predetermined loads can be imposed on horses or mules for any required distance or time and pair after pair can be tested with absolute assurance that the load is the same. This has never before been possible, although much desired, for constructive breeders have realized that selection on the basis of performance was the sure and certain method of improving the draft qualities of horses and mules.

The Collins dynamometer, a device which is pulled by the horse or mule, is a hole in the ground. The tractive pull required to pull a horse or mule walking plow in stubble, pulling a furrow six inches deep and fifteen feet wide, is about 400 pounds. In other words, the team does as much work as it would in pulling a 400 pound weight out of a deep hole in the ground.

As a tractive pull will move horses on other factors. To illustrate a demonstration load was made. A new farm wagon was loaded with grain weighing 8240 pounds, equivalent to 104 bushels of corn. This load, which, plus wagon weight, weighed 7720 pounds, of 3.86 tons, required on concrete pavement a tractive pull of 125 pounds, or 82.5 percent on black pavement, a tractive pull of 200 pounds, or 51.8 percent on aphalt, 300 pounds, or 77.7 percent on dirt. These results, when compared with the results of other tests, show that it is easier to pull three tons on

a concrete road than one ton on a firm dirt road, and indicate, forcefully, the value of hard roads.

No final conclusions can be drawn from these first tests, but evidence brought out indicates that the value of weight has not been overemphasized by horse-users. The true pulling light teams were able to start nearly as large loads as the heavier pairs, but could not carry through, if a, could not pull the load the required distance. Furthermore, the tremendous effort they were obliged to make showed that they would soon be so exhausted that they could not start such a load. The heaviest city team—Cap and King, weight 3630 pounds—were able to start heavier loads than all but two of their competitors, and carried them more quickly, with fewer trials and with less exhaustion.

The team which tied them for first place and championship was game and true but barely made the distance. And Tom and Jerry, a still lighter pair, weight 3030 pounds, true and game in pulling, could not carry the load the required distance. They had the nerve, the will to pull and never quit, but the tremendous muscular exertion which enabled them to start and move the load a short distance could not be long maintained.

The practical value of the tests is very great. Farm and city loads once in motion seldom require more than 300 to 400 pounds tractive pull per pair, but to start such loads may require from 2000 to 1500 pounds, and a bit of bad roads may necessitate the expenditure of 2000 pounds tractive pull or more. The tests show that horses have such reserve power available that they can exert from six to ten times as much power for a short time as they ordinarily expend and that no harm results from the expenditure of such reserve power. This is why horses and mules are so valuable on farms and in the city.

Watt's definition of one horsepower laid down centuries ago, was approximately correct in measuring the energy which a horse can expend continuously throughout a working day; but he failed entirely to recognize the remarkable reserve power seasoned horses and mules possess.

When a single pair of horses—rated at two horse power—can exert over twenty-one horsepower it is obvious that they have a value far above their theoretical two horsepower. Above all other considerations, however, is the fact that we can now test draft horses and mules on a basis of performance, as dairy cattle or race horses are tested. No man would think of using a race horse sire unless he had demonstrated by actual performance that he had the bone and a new, conformation, and under surfaced road where the pulling tests were being held it required 120 pounds, or 1317 pounds tractive pull, per ton. These results, corroborated by other tests, show that they are best.

Progress Editorial For Women

LET DAD SET THE BRAKES
By FLORENCE DAVIES

The old boys got theirs the other day. It was at the International Convention of the Brotherhood of St. Andrew, in Chicago. One session was devoted to discussion of the youth of the present day, it being determined that something should be done to stop what was termed "the popular indoor sport of slaying the 'jazz-crazed' youth of today."

The keynote was struck by a delegate from Philadelphia who summed it up like this: "Frankly, my brethren, I believe we largely are to blame. Twentieth century youth, charged in many quarters as about the most thoughtless, careless, most ungrateful and generally unregenerate lot the world ever has known, gives me no great worry. The present generation will out-grow most of the 'distemper' just as it did the croup, the measles and the mumps, if in the period of illness, it gets the right sort of treatment."

"The trouble with most boys is the fathers they have. A great many of us are far more interested in being successful business or professional men than we are successful fathers, and that is why we aren't satisfied with our boys, or with the present generation, that is why we wonder what is the matter with our churches and schools."

Well, if the "trouble" with most of the boys is the fathers they have, may it not be quite as true that the trouble with most girls is the mothers they have? Perhaps, if, as charged, too many fathers are too busy with business to guide their sons, women are too much engrossed in bringing up their daughters.

Fathers are dissatisfied with sons,

and sons with fathers—wives with husbands and husbands with wives. All are dissatisfied with all, and all unite to criticize the government. Age blames youth for the world's being out of joint, and youth blames that its elders put it out of joint. Who's to set it right? Is it to be the fathers and mothers who set the job? The age of criticism is

first put on the brakes before it can hope to stop the mad pace pursued by youth.

Sometimes the son finds it a hard job to keep up with Dad, but if Dad doesn't slow down, Son, with the natural advantage of youth, will wind him and distance him in the long run.

So you can't beat the game, and as the Philadelphia delegate said, it's up to the fathers—and the mothers—to put the brakes on their own more or less reckless pace instead of keeping up this incessant shout against the follies of the younger set.

ICE—EX-SERVICE MEN

Special effort is being made by the division office of the United Veterans' Bureau at Pittsburgh, bringing before every ex-serviceman and woman some pertinent information regarding Government Insurance.

Ex-service man or woman, health, or if in poor health, service connected disability, totally and permanently disabled, may reinstate his or her Government Insurance. All Government Insurance must be reinstated in more of the six forms of insurance offered by the Government on or before March 3rd, 1924, to the insured's interest.

Term Insurance is a permanent policy at the earliest possible date similar to standard policies by commercial insurance companies but are continued with the same in like manner as Term Insurance.

Interested may secure detail.

ed information regarding both reinstatement of insurance and conversion of Term Insurance to Government Converted Insurance by writing to L. C. Mengel, Insurance Cashier, United States Veterans' Bureau, Allegheny Building, N. S. Pittsburgh, Pa.

Caddis Fly Has Short Life.

The eggs of the caddis fly are laid on the surface of a river or stream, but they sink to the bottom before hatching. The fly is first born in the larval state when it is surrounded by what appears to be long white threads. These are its breathing organs. The larvae at birth are about three-quarters of an inch long. Immediately after birth it commences to build a covering protection for its body from the material nearest at hand. As soon as the fly's wings begin to appear it leaves the water for the dry land, where it finds a place in the sun to dry itself and unfold its wings. Then, quite unrecognizable as the larva that lived at the bottom of the river, it flies about the banks of the river to enjoy a short, but hectic existence.

ACCEPTED FINE POSITION

Charles Beahan, a Clearfield boy who has been connected with theatrical and movie profession in New York City for some time, and who is also a short story writer of ability, has accepted a position as scenario editor with the W. H. Hodgkinson Producing Co., one of the most prominent concerns in the movie world.

How to tell for sure
—what oil your car needs

No. 9 in the series

Perhaps you own
a Maxwell

If you don't own a Maxwell, cut this out and hand it to a friend who does

The late model Maxwell engines are designed with force feed lubricating systems in which oil is forced under pressure to the three main bearings. Holes drilled in the crankshaft carry the oil under pressure from the main bearings to the connecting rod bearings. The other moving parts are lubricated by the oil mist which is created when the oil is forced out through the close clearances at the ends of the connecting rod bearings.

The oil circulating pump is of the impeller type and is located at the camshaft level, drawing its supply through a pipe connecting with a strainer in the oil reservoir.

Aluminum pistons of the constant clearance type are employed. The skirt or bearing part of this type of piston is slotted on one side to provide for expansion under heat and therefore permits the use of close clearances. In addition, horizontal slots are cut through the piston below the lower ring to permit the free return of oil from the cylinder walls.

With the effective control of the oil supply which is secured by this oil return provision on the pistons, the possibility of carbon formation is minimized. In addition, the characteristics of aluminum as a piston material tend to prevent the fuel knock which often occurs when carbon deposits accumulate.

Where natural circulation of the cooling water (thermo-siphon system) is employed as in the Maxwell design, it is desirable to use in warm weather an oil which is suitable for fairly high operating temperatures. Such an oil will be thoroughly atomized and distributed by the Maxwell lubricating system under the conditions of summer operation.

To assure circulation of the lubricating oil in cold weather, the use of an oil which flows freely at low temperatures is necessary because of the elevated location of the oil pump with its long connection to the oil reservoir.

To meet correctly these and other important lubrication features of the Maxwell design, we recommend for the 1922 and 1923 models, the use of Gargyle Mobiloil "A" in summer and Gargyle Mobiloil Arctic in winter. For the 1921 and earlier models, Gargyle Mobiloil Arctic should be used both summer and winter.

Next Friday,
we will tell you about the
Correct Lubrication of your
Ford. Watch for this.

(H) AUTOMOBILE

"HOGGING OFF" CORN SAVES LABOR AND MAKES PORK

With the existing shortage and high price of farm labor, many farmers of Clearfield County are making plans to "hog" on part of their corn crop this year. Practical experience and tests at experiment stations have proved that harvesting corn by this method is not only a labor saver, but is also a means of getting the high dollar for corn.

"Allowing the hogs to harvest the corn crop is no longer considered a wasteful practice but rather is to be highly recommended if a few simple precautions are followed," remarks Doctor H. H. Havner, head of animal husbandry extension work at State College. "Don't turn hogs in until your corn is ready to cut and shock. Remember that shell well is what you want the hogs to work on."

Ordinarily, seven or eight 125-pound shots will harvest an acre of corn, according to Havner. He figures that it takes about three acres of good corn to finish twenty-five shots to an average market weight of from 185 to 200 pounds. It is a good plan to turn into a limited area, say an acre, and let the "harvesters" clean this up before providing more. Successful hog raisers find that woven wire stretched along the corn row is enough to hold the "hoggers" in a portion of the field. It is well to accustom the hogs to the corn before turning in by cutting up the stalks and feeding them for a few days.

Don't forget the clean, fresh water and a protein supplement is Havner's caution. "A high grade tankage, fed at the rate of one-fourth pound per pig daily makes a good ration with corn. The tankage can be mixed with a little water and fed as slop, or be mixed with shorts and water as a feed."

Indiana County Raises First Litter Of Pigs To Weigh Ton at Six Months

The first litter of pigs in Pennsylvania's Ton Litter Contest to weigh 2,000 pounds at the age of six months was produced by Roy McElroy of Indiana County. The ten piglets in the litter weighed just 2,140 pounds with the heaviest pig tipping the scales at 246 pounds and the lightest at 191 pounds. Many litters in different counties of the state are entered in the contest which is being supervised by the agent and extension department at the Pennsylvania State College.

BERKSHIRE FIELD DAY AT PA. STATE COLLEGE OCT. 26

Several Berkshire breeders of Clearfield County are planning to attend the "State" Berkshire Field Day which will be held at State College on October 26 and 27. The event opens on the evening of the 26th with a dinner for the breeders followed by a program of talks by men prominent in the swine industry.

The next day will be spent in touring the hog plant and College Farm. A same judging demonstration and a talk on hog house construction are special features of the day.

Of great interest to the Berkshire men will be the carload lot of Berkshires that are being fitted by the college for the International Livestock Show at Chicago. About one hundred pigs were sent to the College last spring by breeders in all parts of the state. From these will be selected a carload to represent the Pennsylvania breeders of Berkshires at Chicago. Each man will have an opportunity to see the progress made by the pigs he contributed to the lot.

TREATING STOCK FOR LICE

Horned or cattle afflicted with lice can be treated by dusting with a powder made of one part redium fluoride and five parts wheat middlings or other inert powder. Care should be taken

EVERYTHING SET FOR SYRACUSE

Recent reports from headquarters at Syracuse claim that at the close of making entries, over fifteen hundred pure bred cattle from almost every State in the Union, besides other countries of the world, will be present for the judge to pass his decision upon. Pennsylvania alone will have over one hundred pure bred animals at the Show, as well as some two or three hundred high grade animals with Cow Testing records back of them.

The County Agent, with a party of dairy farmers, left Monday evening to take in the Show. It is to be regretted that conditions prevent more of the dairymen from attending this Show, as it is unquestionably the best Dairy Show of its kind ever staged in America, and an opportunity of a life time for the dairymen to see the best individuals of the different breeds, as well as the most up-to-date methods and machinery used in developing and manufacturing the dairy products.

MANY HENS FAIL TOPAY FOR MEALS FARMER GIVES 'EM

Does the average hen in Clearfield County pay for her meal ticket? Judging by the egg production of the average hen in Pennsylvania, which is seventy-five eggs per year, many farm flocks do not pay for their keep.

A hen consumes about eighty pounds of feed in a year, costing about two dollars. Seventy-five eggs sold at the usual market price bring about two dollars a year. This means that the hen scarcely pays for her feed, not to mention labor depreciation of buildings, and interest on the investment. The seventy-five egg hen, then, is a "star boarder."

How can farmers of Clearfield County bring this average egg production up to one hundred and fifty eggs per year where a profit will be realized?

The answer is "feed, weed and breed" according to L. W. Steelman, poultry extension specialist at the Pennsylvania State College. "Feeding means more than simply throwing corn or oats to the flock. It means the systematic feeding of a combination of scratch feed, mash, green feed, water and grit."

As a scratch feed Steelman recommends a mixture of one hundred pounds of cracked corn, one hundred pounds of wheat and fifty pounds of oats. For mash, he suggests one hundred pounds of corn chop, two hundred pounds of ground wheat, one hundred pounds of oats and one hundred pounds of meat scraps.

Even with the best feed, Steelman points out that some hens will not lay. That is where weeding or culling comes in. He advises culling the flock once every week or two during May, June, July and August.

Breeding, according to this poultryman, includes the selection of high producing, typical hens in October and November whose eggs are to be used for hatching purposes. Then mate these hens with a typical pedigree male bird. Eggs picked at random from the produce of the entire flock will not result in flock improvement.

not to get the powder into the eyes or on mucous membranes and not get too much on one animal, one pound being sufficient for five animals. In warm or moderate weather, spraying animals for lice is preferable.

County Agent, R. H. Engle, Erie, Pennsylvania.

County Growers Can Join "400 Bushel Potato Club"

Will there be any potato growers in Clearfield County who produce four hundred bushels per acre this year? If so, they will be eligible for life membership in the "Four Hundred Bushel Potato Club" which has been organized in Pennsylvania to stimulate potato improvement and more economical production.

A gold badge will be awarded to growers qualifying for membership. The badge is in the form of a Keystone with a potato in the center and the figures "400" above it. Encircling the potato is the phrase "potato improvement club." The man's name, the yield per acre, the year, and the variety will be engraved on the back of the badge. The Pennsylvania and Maryland Joint Stock Land Bank of Harrisburg, through its president, Fred Rasmussen, is donating the

POULTRY SHOW AT STATE COLLEGE OCTOBER 18, 19, 20

The first standard production Poultry Show of Pennsylvania will be held at Pennsylvania State College, October 18th, 19th and 20th, under the auspices of the Penn State Poultry Club and the Pennsylvania State College Poultry Department. This show will give the utility man an opportunity to compete on the merits of production rather than show type.

There is a need for such a Show, since the State of Pennsylvania has always been among the first in the production of poultry and eggs. As years have passed, many of the Pennsylvania poultrymen have developed birds of high egg and meat production ability. There are hundreds of such birds in our State, but never before have the owners of such birds had an opportunity to place their birds in a State Wide Competition of this nature.

Entries for this Show will close October 18th, and all exhibits must be in the Show Room by 12:00 P. M., Wednesday night, October 17th, as judging will commence immediately at 10:00 A. M., Thursday, October 18th. The Show Room will be open to receive exhibits Tuesday, October 16th. All birds will be fed and cared for at the expense of the Club. Entry fees will be twenty-five cents for each single entry and one dollar for pen entries. The latter consisting of one male and four females. All shipping charges must be prepaid. All entries must be made upon the regulation blanks furnished by the Secretary, and all entry fees must be paid in full when they are made.

There will be a public auction of cockerels at 1:00 P. M., Friday, October 19th. These birds have been bred and reared on the College poultry plant. They are all fine husky fellows, taken from the best flock owned by the College. If you cannot come yourself to buy one or more of these fine breeders, arrange with a fellow poultryman to buy one for you, or send in sealed bids to the Secretary of the Show.

The County Farm Bureau has a limited number of Premium Books in the Office, which can be had upon request. Also further information can be obtained either from the Farm Bureau, or by writing direct to Leon Todd, Secretary of the Penn State Poultry Club, State College, Pennsylvania.

The Fall Duties On The Farm

By DONALD MCK. GRAY.

The old hens, in many cases, have begun to molt heavily and all the culls have been disposed of. It is now time to select the breeding flock for this next spring. The real late molder that is laying heavily and shows by her light shanks that she gave a good account of herself is the bird that falls in this class.

If she has laid a large number of good sized eggs she will generally have a broad flat back and a deep full breast. The head should be clean cut and the fowl should show every indication of vigor. Discard all birds having any standard disqualifications. Great care in selection will be well paid for in the winter egg production. These good old birds will soon go into a molt and it will be necessary for them to grow new feathers as well as put back in their bodies some of the elements needed to make hatchable eggs. While little is known about feeding the breeding hen, most of the poultry men feel that it is essential to give them at this time green food and plenty of milk.

The green foods that are so desirable are cabbage, alfalfa, clover hay and sprouted oats. Provide the old flock with an ample run where they can get out in the sunlight and exercise.

The pullets certainly deserve some consideration as we are going to depend on them for the early winter eggs. Here it is well to proceed cautiously. There is a tendency for many of the farmers to be "penny wise and pound foolish" by bringing the young birds into laying before a big frame is built and enough flesh is stored on the body. This serious mistake can be avoided by taking away the beef scrap two or three weeks when the birds begin to show signs of coming into production. Place the pullets in their winter quarters before they start to lay heavily for if they are moved after they get well under way production is liable to be checked.

NEGLECT RUINS PULLETS THAT LAY "GOLDEN EGGS"

A common practice among farmers at this time of the year is to be busy with other farm work and neglect the care of pullets which are to lay the "golden eggs" this fall. Frequently these birds are fed too forcing a food and come into laying too soon.

"Just as soon as the pullets begin to 'bud' out with a red comb and red wattles, take away the protein feeds such as milk or meat," is the advice of a veteran Clearfield county poultryman. "If possible, separate the advanced maturing birds from the rest of the flock, giving them plenty of free range, and abundance of green food, and all of the corn and wheat they wish."

When these birds have a good frame, have developed a good size and have a surplus amount of fat on their bodies, he suggests giving them the protein feeds again and let them begin laying. Ordinarily, it is advisable not to let Leghorn pullets lay much before five and one-half to six months and pullets of the heavy breeds six and one-half to seven months.

ed, which is apt to be followed up by that much dreaded fall molt.

It is absolutely foolish for us to feed a lot of lice, mites and worms when a little care at the time of confinement will eliminate these. If the birds are at all lousy when handled, treat them with sodium fluoride. Seven or eight pinches applied to the major sections of the body will kill all of these pests. The scaly leg mite is another enemy which can be annihilated at this time. An application of a mixture of equal parts of raw linseed oil and kerosene will give the desired results. The long round worm which causes much havoc in the chickens' intestines can be killed by incorporating ground tobacco stems in the mash. The Extension Service will furnish, if needed, detailed information concerning the eradication of this pest.

The red mite should be hunted out and killed by a good spray. Before this is done, however, the old litter and filth should be removed from all the pens. The walls should be swept down and the floors scraped. If the floor is dirt, remove and renew the surface. The windows should also be cleaned at this time. They were packed there to admit light and we are defeating their purpose when we allow them to become fogged with grime. New coat the interior of the house with a good spray, being sure all the cracks and corners are reached. Go over the roosts with a good perch paint, slapping it well into the joints. The building should be made draft proof by plugging up the cracks in the rear and side walls and by providing solid partitions every twenty feet. New muslin on all the window frames, a piece of tar paper here and there and one or two nails will usually complete the operation of starting off on a prosperous poultry year.

We will now have a flock of well selected clean hens, stowed away for the winter in dry, warm, sanitary quarters.

COCKLEBURS POISON HOGS

Cockleburrs cause serious loss by poisoning hogs. They are very deadly just after coming through the ground and while still in the two-leaf stage. They are often the first thing out in the spring and hog men turn greedily with the result that a bad inflammation is set up in the kidneys and bladder, causing quite sudden death, due to uric poisoning.

Examine your pastures for cockleburrs and if found, keep your hogs elsewhere until the burrs have passed the two-leaf stage. After that they are not palatable, neither are they as poisonous.

FIND 130 "BOARDER COWS" IN ONE MONTH

Additional proof that cow testing pays is contained in the May reports of twenty-three Pennsylvania cow testing associations, which show that one hundred and thirty unprofitable cows were culled out as "boarders" from the total of 7,421 cows tested, according to an announcement from the Clearfield County Farm Bureau Office.

The cost of milk production is being lessened daily by the hundreds of members of cow testing associations. One farmer reports one hundred per cent increase in production through the adoption of balanced ration feeding methods recommended by his tester.

Of the total number of cows tested in the month, 1389 were reported as giving over forty pounds of fat and 1431 cows with over 1000 pounds of milk. In the higher production class, 447 gave more than fifty pounds of fat and 815 gave more than 1200 pounds of milk. A year ago Pennsylvania ranked second among all states in the number of cow testing associations, and still holds a very high rating in this respect.

SORTING OF APPLES BY TABLE MACHINE IS VERY SATISFACTORY

A simple and efficient sorting table has been devised for the apple grower who does not have enough fruit to warrant the purchase of a mechanical grader. This table will pay for the cost of construction many times over in a single season and is displacing the old inefficient and back-breaking method of grading apples out of a pile, basket or crate.

Extension fruit specialists at State College find that two types of sorting tables are being used in the state. The simple form which is well adapted to sorting into bushels or crates, is a rectangular table, eight feet long and four feet wide, supported at the corners by legs and covered by canvas or burlap. The frame is of two by four material. The table is light and is carried from tree to tree, the picked apples poured directly upon it, and the grading done at once.

A second type of sorting table that is meeting with satisfaction where apples are packed "tree run" is built about the same length, eight feet, but is four feet wide at one end and tapers to about a foot at the other. The sides are made of one by six boards and the bottom is slatted to allow the leaves to fall thru. By mounting this table with the narrow end a trifle above the barrel and the wide end six or eight inches higher, the apples will run toward the narrow end.

A strip of burlap or canvas is tacked to the lower end of the table and is drawn over the barrel top loosely. The operator stands or sits behind the barrel and as the apples pass from the table on to the apron, he removes the defective fruit. When the apron contains about a half bushel of fruit, it is lowered carefully into the barrel and emptied. The barrel is then shaken and the operation repeated.

PUREBREDS SUPPLANT SCRUBS

From a county of "pneve woods rooters" to a county filled with prebred hogs in four years is what has happened to the swine industry in Ware County, Georgia. Four years ago there were only three small breeders of purebreds in the County. This year it is believed that ninety per cent of the hogs marketed will show the result of purebred influence and that the number of hogs in the county will be more than doubled.

Demonstrations in club work have resulted in selling the purebred idea to practically all farmers of the county. Not only have every Pig Club member made money from his hogs but the fathers of the boys seeing the larger weights and bigger profits obtained, are killing the scrub stock and replacing it with purebred.

County Agent, R. J. Heyde, Waycross, Georgia.

WHEAT IS A GOOD STOCK FOOD SAYS THE FARM BUREAU

Although wheat has seldom been used as livestock feed in Clearfield County, many farmers are making preparations to feed some wheat, especially the poor grades, if present prices continue.

"What can safely be substituted for either corn or barley without affecting the value of the ration," is the statement issued by the Farm Bureau Office. "It should be ground fine and is better fed in a mash with oats, barley or other better feeds. Fed alone, it is likely to cause trouble by forming a sticky mass in the animal's stomach."

Experienced hog raisers have found that wheat may be substituted for corn or barley in a ration rich feed such as tankage or skim milk. It is advisable and increases the food value twenty per cent.

Ground wheat is also successfully used to feed cattle. It may be used for the conditioning of the ration and for the fattening of it. Sheep and horses on wheat feed are safe to feed when one third of the ration is made of horses due to the fact that wheat and skin eruptions that are likely to arise.

Dairymen should not make the mistake of trying to substitute wheat for bran in feeding dairy cows. "The Farm Bureau" is the Farm Bureau. "It is a substitute for corn in the ration and is a bulky feed such as bran or corn to lighten up the mixture. Wheat, both corn and wheat, is the corn and cob and the ground together more bulk."

Good Egg Production Requires Right Kind Of Housing For Winter

With the winter season approaching, poultrymen, and in some cases poultrywomen, of Clearfield County are making preparations for the winter housing of their flock. Experience has shown that the old poultry house should be emptied for a week and thoroughly cleaned and disinfected before the young pullets are put in for winter quarters. It has also been demonstrated that the pullets should be brought into the laying house before they begin to lay. A change in quarters after egg production has started is likely to produce a fall molt.

Well ventilated and dry houses are necessary for healthy and maximum production and are likely to result from raising birds from the ground. Old poultrymen state that a bird should have from five to five square feet of floor space. They claim that, regardless of the case, a flock will not lay to sixty per cent egg production if it is crowded.

COSTS \$101.99 TO KEEP COW

Based on present prices, the cost of keeping a cow one year (exclusive of labor for milking) is \$101.99. This is for a cow that before you owned her cost you \$101.99 worth of feed and a cow The pleasure of a cow is not only in milking her twice daily, but in the stable, maybe a cow is a better friend to her and best of all, she does not work, she just "beef" the cow that does not pay for her keep?

Find out what your cow is doing by weighing her. A cow cannot afford to be a poor cow. To a poor cow, the cow and the farmer work on the local County Agent, J. H. Plattsburgh, New York.

ORDINARY RAISING OF HOGS

Our most important livestock problem is the management of hogs.

Why is it that only a few farmers grow two hundred or fifty pound hogs by November? Why is it that a great many farmers raise only an average of three to four pigs per sow? Why do about half the pigs on so many farms refuse to become thrifty even on the best of feed? What causes so many runts? What is responsible for the many inquiries relative to worms, bull-nose, typhoid, canker, sore mouth, unthriftiness of pigs, etc? Some say: "I had hard luck with my pigs." Is it hard luck? The real answer is filth and parasites have been doing deadly work, as has been proven.

Four Generations of Mountains.

The great changes that the earth undergoes may be judged from the fact that four times since geological history began new generations of mountains have risen in Europe and there is no reason to suppose that it will not be another Indian day.

TO SPEAK AT OSCEOLA

Hon. W. I. Swoope will be the speaker at this evening's Commercial Club meeting at Osceola. Congressman Swoope will speak on the subject "A Citizen's Duty."

Cows Eat Codfish.

In Norway the heads of codfish are mixed with marine plants and given to the cows to increase their yield of milk.

BIG INCREASE IN PUREBREDS

Seventy-three per cent of the dairy bulls in Green Lake county, Wisconsin, are purebred, whereas three years ago only thirty-seven per cent of the dairy sires were purebred. This increase of nearly one hundred per cent has been brought about by persistent organized effort in breed promotion work.

Why take the risk?

MANY have found by their own experience that coffee's effect is harmful. Health authorities warn against risking the growth and development of children with the drug element in coffee.

Why take chances with your health, and thus risk comfort, happiness—success?

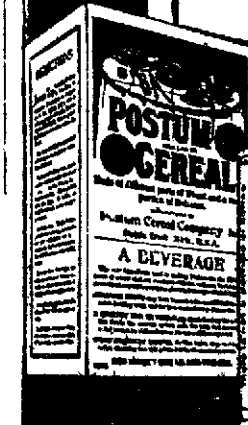

There's both safety and satisfaction in Postum as your mealtime drink. You'll thoroughly enjoy its delightful flavor and aroma. Postum contains nothing that can harm you. As many cups as you like at any meal—with no penalties to pay in wakeful nights and daytime dullness.

Your grocer sells Postum in two forms: Instant Postum (in tin) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer the flavor brought out by boiling fully 20 minutes. The cost of either form is about one-half cent a cup.

The Formula for Eggs

Conkey's Buttermilk Laying Mash for eggs and Conkey's Scratch Grains for maintenance and exercise—that is the Conkey way of feeding. Hens prefer scratch grains to mash if given a choice, but it is the mash and not the grains that makes the eggs. Arrange to feed so the hens will consume twice as much mash as grain by measure.

Conkey's

Buttermilk Laying Mash

Balanced egg-making ration just right in animal protein (needed for eggs) and low in fibre (indigestible waste matter). No mill sweepings, shell, alfalfa, ground hay or trashy filler. All nutritious feed—clean and sweet.

Conkey's contains wholesome meat scraps, granulated bone, grains ground to proper fineness, and fresh concentrated buttermilk. We use Semi-Solid Buttermilk only. Mixed with exacting care and scientific accuracy, it gets remarkable results in a perfectly natural way, without ruinous artificial stimulation. It is Nature's balanced egg-maker.

Insist on Conkey's—in Original Packages

For best results, feed all three Conkey Buttermilk Feeds—one each for Starting, Growing and Laying. Don't break the Chain of Conkey's Original Buttermilk Feeds. Ask for Conkey's and always get in Original Packages. Big Poultry Book Free. Ask for it.

Harlequin Tea Room

Wined Out Conquered Rites

The Christian religion of France is perhaps the greatest relic of all history. Conquered by the vanquished, a few Indians still manage to hang on to the old rites, and of the Missions in style of the ancient superior race of white men all about them. No Aborigines were left in France. The Christians exterminated them like beasts—men, women and children alike and cleared the land for the foundation of modern civilization.

WOMAN SICK TWO YEARS

Caused by Troubles Women Often Have—Relieved by Lydia E. Pinkham's Vegetable Compound

Medina, N. Y.—"I had a great deal of trouble such as women often have, and this effected my nerves. For over two years I suffered this way, then I read in the Buffalo Times about Lydia E. Pinkham's Vegetable Compound and have taken it with very good results. I am very much better and feel justified in praising the Vegetable Compound to my friends and neighbors who suffer from anything of the kind."—Mrs. Wm. H. ADAMS, 311 Lin Road, Medina, N. Y.

Feels Like Girl Sixteen
Rochester, N. Y.—"After my twin girls were born I was all run-down. My neighbors thought I was going to die. I saw your advertisement in the paper and bought Lydia E. Pinkham's Vegetable Compound. The first bottle helped me and I kept on taking it. I only weighed ninety pounds when I began taking it, and I have gained in weight and feel like a girl sixteen. I never can say enough for Lydia E. Pinkham's Vegetable Compound."—Mrs. NELLIE DORSEY, 16 Skuse Park, Rochester, N. Y.

Shur-on SPECTACLES & EYEGLASSES

The most dangerous of all eye troubles is that which is caused by wearing cheap, ill-fitting spectacles. Shur-on eye glasses are the only ones that will cure this trouble.

Individuality—

how often it depends on appropriate spectacles and eyeglasses

DID you ever try to analyze individuality? Sometimes, no doubt, it is explained by clothes of fashion's late vogue. Perhaps it means that each costume suits the occasion to a nicety. But how often it depends on the spectacles! For spectacles and eyeglasses must agree with face, costume and occasion. And they can, quite easily, if you let us fit you with the correct spectacles and eyeglasses for sport, for evening functions and for afternoon. Thus you can be not only authoritative but the utmost in scientific precision.

NUMBER 238

LOYD GEORGE IN CANADIAN SPEECH INDICATES HE IS READY TO ASSUME PREMIERSHIP WHEN BALDWIN QUILTS

With Lloyd George, Montreal, Canada, Oct. 9.—Lloyd George is keeping his ear in the international waters, despite the fact that he no longer is steering the British "Ship of State."

Having in mind the possibility that Stresemann may fall in a week or two, and that his fall might conceivably be followed by the fall of the British Ministry, Lloyd George, among other things, reminds his countrymen that he is ready at hand for the need arises.

This is the construction some of his political friends put on the statement he issued here relating to the Hughes Economic Expert Plan for settling the reparation question.

It was his first utterance on the international situation beyond a general statement. In effect, Lloyd George urged all the friends and supporters of the Hughes plan for an Economic Commission to determine Germany's capacity to pay to begin urging it as the only sound and workable plan. France has stood in the way of the plan from the beginning.

Lloyd George and his party are to leave this afternoon for Ottawa for a brief stay.

Berlin, Oct. 9.—Chancellor Stresemann has won the required confidence of the Reichstag in his new cabinet ministry despite the general feeling it cannot long endure.

By a two-thirds vote the Reichstag passed a resolution of confidence in the Stresemann Government late last night. The Deutsche Nationalists, Communists and the Barbarian Folk party, not to be confused with the Folk's Party of Germany, voted against the Chancellor.

At the time when Stresemann was receiving support of the legislature, Hugo Stinnes, stung by charges of Bernhard in the Vossische Zeitung that the Industrialists were trying to establish a dictatorship by driving prices "sky highward" published in the Deutsche Allgemeine Zeitung a statement under his own name denying this. In a lengthy article Stinnes revealed that he and another Industrialist met toward the end of September and agreed upon the eight hour day in the mines. They also decided to refuse a demand for higher wages and to decrease the price of coal.

Boyce and McCracken File Papers To Get On November Ballots

Clearfield county voters will have lots of choice when it comes to voting for the office of County Commissioner at the approaching November election as the independent movement which developed shortly after the primary election resulted in the placing of the names of John Boyce, Republican, of Clearfield, and Blake W. McCracken, Democrat, of Mahanoy, as candidates of the Independent party for the office of County Commissioner of Clearfield county in the ballot at the November election.

The election law provides for the placing of the names of candidates for office on the ballot after the primary. To do this a name must be taken and presented by a statement of affiliation filed with the Prothonotary and signed by a majority of the members of the party and filed with the County and filed with the Prothonotary at least twenty days before the election.

This procedure was carried out by those in sympathy with this independent movement, designed, as its sponsors say for the defeat of the Board of County Commissioners, all of whom were nominated at the primary election.

The petitions nominating Messrs. Boyce and McCracken contain 449 names and are sworn to by J. W. Patchin, W. H. McKee, M. S. Rowne, A. M. Braund and J. D. Cornelly.

The signers of the nominating petitions and friends of the Independent movement will meet in No. 1 house in the Borough building this evening at 8 o'clock at which time they expect to perfect their organization for conducting the campaign for the Independent ticket.

PRIEST'S WIFE HAS NO REGRETS OVER KILLING OF CLERIC

"I Will Probably Go to the Gallows, But He Cheated My People," Says Ramey Woman.

HUSBAND ARRIVES

Chicago, Oct. 9.—Calm and orderly funeral services for the Rev. St. Stanislaus, who was killed by a taxicab, were held in the Holy Trinity church here today.

Rev. Nicholas Struynsky, husband of the slain priest, arrived here from Rochester, New York, to attend the funeral.

Rev. Struynsky said he thought his wife was a better person than he was. He said he was a better person than he was.

"I am well," Rev. Struynsky said. "He was a man of the people."

A. F. of L. Delegates Vote 369 Ballots Against 9 To Oust Communist Editor

Portland, Ore., Oct. 9.—Following the almost unanimous decision of the delegates to the American Federation of Labor convention here to remove as a delegate Wm. J. Dunne, alleged Communist Editor from Butte, Montana, the Congress expected to discuss today a proposal to revoke the charter of the Seattle Labor Council because of its alleged radical tendencies.

Delegate James Duncan, representing the Seattle organization, supported Dunne when he was ousted from the meeting yesterday by a vote of 369 to 9.

Dunne's expulsion followed a day of heated debate over the resolution calling for his vacating.

TAXICAB THIEVES STEAL PIGS FROM JERSEY FARMERS

New York, Oct. 9.—Pig thieves who stole about 100 Jersey in taxicabs, are being sought by the police of St. Louis and other neighboring towns.

Earlier, a few days ago, a taxicab driver in a piggery, saw three men get out and later heard the squeals of a dozen pigs. Firemen from Washington Hook and Ladder Company, who heard the commotion, seized the men and went in search of the pigs.

Three dark figures were seen in the heavy brush, but not until after a number of shots were fired at them. The taxi disappeared at the same time.

There has been much rustling going on in the stock farms along the Jersey Meadows, according to pig raisers, but this is the first time taxicabs have been used as a means of carrying away the loot.

ROY STRUNK DEAD

E. P. Carr of Clearfield street, was advised by wire Monday morning of the death of Roy Strunk of Homer City. He died Sunday morning and his body will be brought to Clearfield on the Penna. train Wednesday morning and taken to Centre church and buried from there. He was married to Miss Hattie Carr and leaves to mourn his death, his widow and four daughters. Also his brothers and sisters. He had been sick for almost a year.

GOING TO DENVER, COLO. TO MAKE THEIR HOME

Mrs. Charles E. Boyer, of Clearfield, left this afternoon for Denver, Colo., where they expect to make their home, largely in the interest of the latter's health. Mrs. Boyer is a native of Clearfield and her husband is a native of Clearfield. They are both of the Clearfield community.

LOST BARN AND GARAGE

The large frame barn-garage and an auto stable, the property of Joseph Thompson, and located on the Joe Thompson home tract in Lewis township, near Glen Richey, were totally destroyed by fire Sunday last, entailing a loss of about \$4,500.

COUNTY CONTROLLER GRANT H. THOMPSON DIED THIS MORNING FOLLOWING STROKE WHICH HE SUFFERED FRIDAY EVENING

His Passing Means Loss of Capable Official, An Estimable Citizen and God-fearing Christian.

THE FRIEND OF ALL

County Controller Grant H. Thompson, who suffered a stroke Friday evening, died this morning at his home in Clearfield.

There was no hope of Mr. Thompson's recovery from the time he was stricken and he passed away peacefully.

Grant H. Thompson was a son of the late Alex. Irm and Catherine Irm Thompson and was born in Clearfield on May 8th, 1866.

At the age of 58th year of his age at his death, a boy he came to Clearfield and earned the mercantile business with the Little Brothers, then one of Clearfield's leading mercantile establishments. He left this position to assume charge as manager of the McGee's Mill Supply Company, where he remained in the general merchandise business for twenty or more years. He was a good business man and possessing the faculty of making friends was long one of the best known men in that section of the county.

He was elected prothonotary clerk of the courts of Clearfield county in November, 1898, and served most acceptably in that position for a period of two terms or six years. He later engaged in the coal business in Cambria county and for the past five years and up until appointed county controller by Governor Spraul was affiliated with the Rombard coal operations in this county.

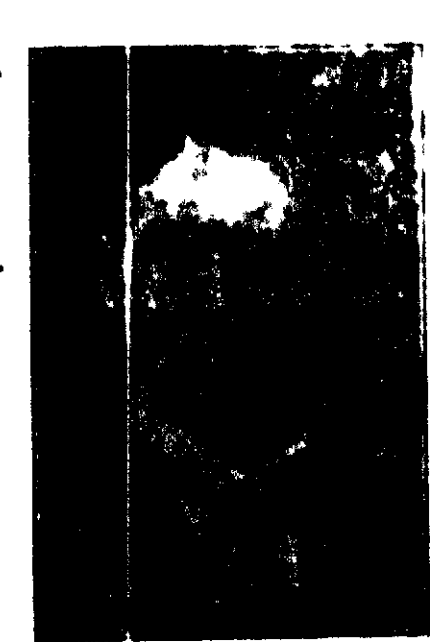

He assumed the duties of county controller in 1921. He proved to be a capable, competent officer, filled his position with credit to himself and such satisfaction to his constituents that he was re-nominated for the office by a substantial plurality at the primary election on Sept. 18th last.

His health began to fail for several years ago and he had a couple of serious attacks. He underwent an operation for a few weeks before he died and was a patient at the Clearfield hospital for some time before receiving the stroke which ended his death.

Grant Thompson was an honest, upright man, and one whom it was a pleasure to know and have for a friend. Gentle and kind, he endeavored so far as he was able to do good to everybody and made this motto his own: "A better world for all."

He leaves his widow, Mrs. P. Thompson, his daughter, Sarah McGee Thompson. He is also survived by the following brothers and sisters: J. J. of Philadelphia; William, of Portage; Boyd and Augustus, of Portage; Clyde, of Omaha, Nebraska; and Roy B. of Clearfield; Mrs. Margaret Brown, of Clearfield; Ida, M. (Dr.) W. A. Henry, of Pottsville; Alice, Mrs. L. A. Clement of Newport, Maine; and Emma, Mrs. O. F. Libby, of Pittsfield, Maine.

The funeral will be held Friday afternoon and will be in charge of the Masonic fraternity, the deceased having been affiliated with the Blue Lodge, Chapter, Commandery, and the Shrine. Interment will be made in the Hillcrest cemetery.

GRANT H. THOMPSON

SALOON OWNERS TO GET HEARING PRIOR TO CLOSING DOORS

Philadelphia, Oct. 8.—Judge Thompson, in United States District Court here today, refused to grant injunctions against saloon owners in Schuylkill county.

The refusal was not final and is purely a technicality. The shop of the government had not shown notice of the hearing to the saloon owners and a writ of habeas corpus had not been granted by the Supreme Court had refused to grant a writ of habeas corpus.

Judge Thompson declared that he would follow his precedent.

He gave the saloon owners a week to show cause why they should not be closed. He also gave the saloon owners a week to show cause why they should not be closed.

Mrs. Maud Walker, who is in charge of the Clearfield County Jail, was on duty today.

She came to Clearfield today to attend to the funeral of Grant Thompson.

She said that she was very sorry to hear of his death.

She said that she was very sorry to hear of his death.

She said that she was very sorry to hear of his death.

FOUR DEATH TOLL OF TENEMENT FIRE IN BROOKLYN TODAY

New York, Oct. 9.—Three brothers and their father lost their lives early today in a tenement fire in Brooklyn. The mother and wife, Mrs. Charles Amaratta, is in the hospital suffering from burns. Physicians do not believe she can recover.

The fire, which started on the ground floor, spread to adjacent tenements, driving more than 500 occupants, clad in their night clothes into the street.

DR. LOWMAN ON ROAD TO RECOVERY

Dr. John B. Lowman, of Johnstown, seriously injured in a fall down a flight of stairs at the Pittsburgh Country Club, while in attendance at the convention of the Pennsylvania State Medical Society, was reported today to be in a much improved condition.

It is understood that Dr. Lowman will remain at the hospital for some time, absolute rest being required. Mr. Lowman is with her husband.

KILLS A GRAY FOX WITH STONE

Horner Hess, while motoring over the road leading from the Tyrone pike to Flat Rock, saw a gray fox on the road in front of his car Thursday evening of last week. It did not scamper off as might have been expected when the car approached, but circled around as if bewildered when the car lights flashed on it. Mr. Hess stopped, got out and picked up a stone, which he hurled with much force at the animal, striking it a blow that caused its death.

COYNE, LEGLESS, HELD FOR GRAND JURY TO ANSWER TO MURDER OF HIS WIFE

Pittsburgh, Pa., Oct. 9.—A legless man today was held for the action of the grand jury charged with murder. He is Patrick Coyne, a railroad worker, who confessed to shooting and killing his two months bride in their honeymoon cottage on July 18. A few hours after the shooting, Coyne, a brakeman, fell between a train of cars in the Duquesne street yards and to both legs of a bottle of champagne, toy balloons and flowers were dropped from the roof of the hangar.

After the christening, if the weather permits, the Shenandoah will take the Denbys on a short ride around Lakehurst.

"FAIR AND COOL" IS FORECAST FOR BIG WORLD SERIES

Washington, Oct. 9.—"Fair and cool weather" was forecasted for the world series by the Weather Bureau here today.

"As far ahead as we can see there is no sign of a change in the present fair and cool weather," it was said. "Probably it will last the rest of this week and possibly well into next."

WORLD SERIES AT HEALEY'S

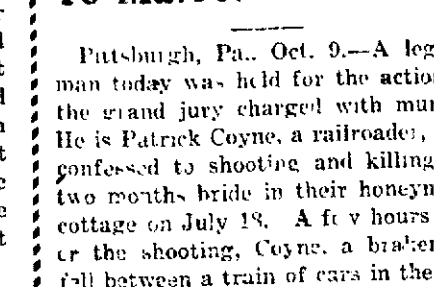

Local fans will be able to "see" the World Series ball games play by play at Healey's Billiard Parlors on Market street every afternoon, while the World's championship is being decided.

SCORES MEET DEATH BY DROWNING IN A FRENCH COAST TOWN

Havre, France, Oct. 9.—Forty-two persons, including several women and children are believed to have been drowned in the recent storm that swept the coast of France. A dredger, making its way from Gaen to Havre, was swept to sea and is thought to have sunk off Calvados. A small steamer named the Normande is also reported missing.

Best Crops Are Secured From Fall Plowing

By ANDREW BOSS, Minnesota, Chief Agronomy and Farm Management.

(National Crop Improvement Service.)

THE best crops are nearly always secured on the early fall plowed land. The fall plowed land lies open and porous, ready to receive the fall rain and absorbs a larger amount of moisture than unplowed land. The early plowing also gives time for the land to settle again before spring and allows it to become compact enough to re-establish good capillary action, thus getting moisture to the plants when moisture is needed. When straw, stubble manure or weeds are plowed

COMMERCIAL TRUCK IS DIVORCED FROM DOLLINGS CONTROL

Philadelphia, Pa., Oct. 9.—Judge Dick, in federal court, today approved an agreement by which the Commercial Truck and the Truck Service Company are cut away from the control of the R. L. Dollings Company of Pennsylvania in return for the payment of about \$350,000 in cash and real estate. The truck companies were subsidiaries of the Dollings Company and when the receiver asked the court to grant him authority to liquidate the company, a number of interested stockholders objected on the ground they did not want to lose "Dollings subsidiaries."

"DEATH" HAND IS MAIN EVIDENCE IN SLAYING OF NURSE

Pittsburgh, Pa., Oct. 9.—The ace, the deuce and trey of diamonds and the five of spades will form an important part in the evidence against Lorenzo Savage, confessed slayer of Elsie Barthel and self styled "Voodoo" Doctor and dispenser of love charms.

While preparations were being completed for the burial this afternoon of the slain nurse, Savage was arraigned in Central Police Station today and turned over to the coroner, charged with murder.

The playing cards were found on the girl's body, discovered on the grounds of the deserted Hussey mansion, where, Savage confessed, he dropped a 75 pound granite block on her head Saturday night when she refused to pay him the money for his services.

BEE-MEN PREPARE
WINTER QUARTERS

With a rather light crop of honey reported in most instances this year, most beekeepers in the County are preparing their colonies very carefully for the winter period. The most successful bee-men find that about five pounds of honey is required to carry the bees over the winter and spring. This is the amount that is contained in standard Hoffman frames, colonies having less than this amount after the fall honey flow over are fed with either sugar syrup or honey from a healthy colony, according to advice from E. Phillips, extension bee specialist at the Pennsylvania State College.

A mixture of two and one-half parts of white granulated sugar to one part of water, heated until all the sugar is dissolved, is found very satisfactory for fall feeding. The syrup is warmed and in the evening to prevent robbing.

For winter protection, the practice of placing the colonies in boxes or packing cases has been followed with good results. A space between the hive and the box is filled with chaff, straw shavings or other fine material. A very convenient pack-

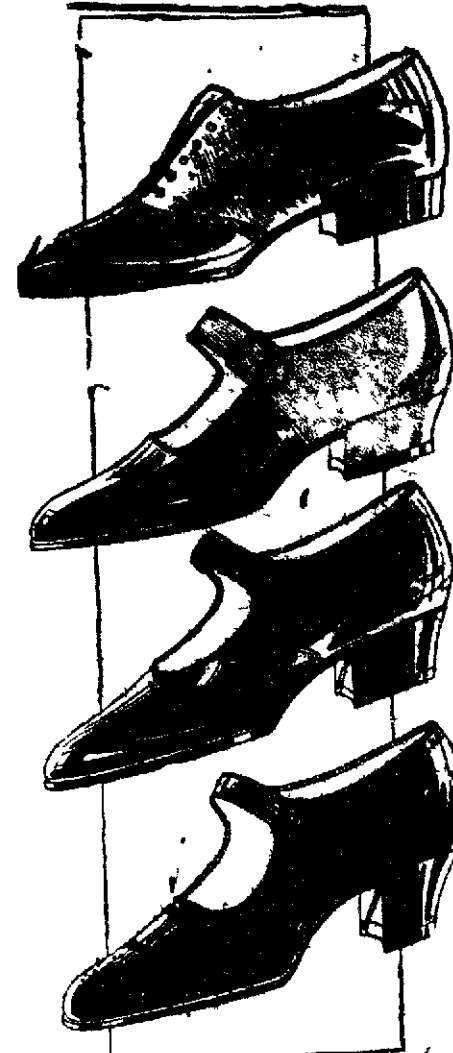

Scene from Act Three, "HONEYMOON HOUSE," With That Inimitable Comedian, JACK NORWORTH, Which Comes to The Driggs Theatre for One Night Only, FRIDAY, OCTOBER 12.

ing case providing protection for four colonies in one unit is described in Farmers' Bulletin 1012 on "The Preparation of Bees for Outdoor Wintering." It may be obtained from the County Agent or from the United States Department of Agriculture.

Veteran beekeepers state that

nothing is gained and much may be lost by delaying the packing for winter after the honey flow has stopped in the fall. This generally occurs between the first and middle of October when the brood rearing has ceased and the active season is ended.

LEWISTOWN, PA.

To women who
must be careful-

HOW disheartening it is to find that the scales are correct; that one really weighs a few pounds more—those few pounds that make such a difference in one's whole appearance!

But you can reduce—without hunger or discomfort.

Be careful to avoid wheat breads and other fattening breadstuffs. Instead, make these delicious "Slim-Jane Biscuits" and "Slim-Jane Muffins", making them yourself, so that you know they have the minimum of fuel value. Why not try them today?

NOTE: And try beating a pint of evaporated milk into a pound of butter, substituting it for rich whole butter. It tastes good and will not increase your weight.

"Slim-Jane Biscuits"

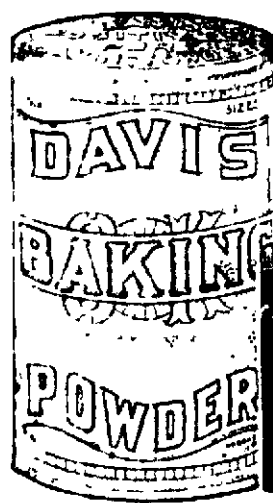

2 c. graham flour 2 tb. shortening
4 ts. Davis Baking Powder 3/4 to 1 c. skimmed milk
3/4 ts. salt

Thoroughly mix the Davis Baking Powder and salt with the flour, rub in the shortening with finger tips, or cut in with knife, gradually add the milk, mixing lightly. On floured board, roll to 1/4" thickness, shape with cutter and bake in hot oven 12 to 15 minutes.

"Slim-Jane Muffins"

2 c. clean bran 1/2 c. sweetening (molasses preferred)
1 c. whole wheat flour 1 1/2 c. skimmed milk
3 ts. Davis Baking Powder 1 egg-beaten
1 ts. salt 1/4 lb. melted shortening

Mix in order given, sift flour, Davis Baking Powder and salt together. Bake in hot oven (400° F) 20 to 25 minutes, in greased muffin tins.

Bake it BEST with

OK for 45 years

Poultry Culling Demonstration

(Net. Nat. Crop Improvement Service.)

"It is proverbial that the man who goes into poultry on a large scale usually comes to grief," says John J. Jaquish, the county agent at Tunkhannock, Pa., who is giving this demonstration. "He is giving this demonstration to show that he finds his poultry a more profitable proposition than his other investments. He is showing that he makes a selection from the best flocks some time in October," says Mr. D. A. Merriam, American Steel and Wire company. "These birds are then banded and used for breeding the coming year."

HUSBAND OF MRS. WEBB IS EXONERATED

N. J. De S. Any day have attended the trial of Mrs. Webb. The husband of the woman who was found dead in the woods near the country club. Webb had the grand jury return a verdict of death at the country club.

Mrs. Webb's husband, Mr. Webb, was found guilty of the murder of his wife. The jury found that he had killed her in the woods near the country club. The husband of the woman who was found dead in the woods near the country club. Webb had the grand jury return a verdict of death at the country club.

Wolverine Trapper's Enemy. The wolverine is the greatest enemy of the trapper, and an Indian will often give up a trapper, when he finds a wolverine on his trail. The animal follows his tracks, visiting all the traps, eating or tearing up everything caught in them, besides breaking into camps, from which it carries away utensils and food alike, demolishing what it cannot carry, or what is nailed down.

Sore Throat and Chest Colds Conquered Over Night With Mustarine

Just Rub It On. It Will Not Blister

There surely is nothing so good in earth as Mustarine. The minute you rub it on you'll know that the misery, pain and agony has started to go. It penetrates and will not blister. Don't worry about that Cold in the Chest, that Hacking Cough or Sore Throat, for Mustarine applied to night will make you feel fine and sound by morning. Thousands use it for pain of Neuralgia, Lumbago, Neuritis and for swollen, aching Rheumatic Joints. Use it for Chills and Frosted Feet. Druggists everywhere can supply you but be sure you get the original Mustarine in the yellow box—30 and 60 cents.

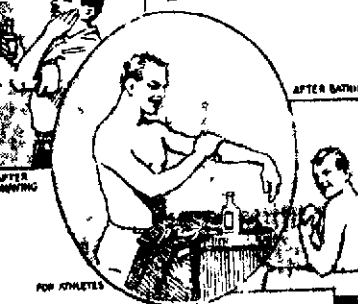

ANOTHER CAMP ROBBED

Allen Maines, who has a hunting camp on Gifford Run at the high landing crossing, was in town today hunting State Game Protector W. J. Davis to inform him that the camp robbers who visited the Caledonia pike country last week also stopped at his camp and robbed it of from \$15 to \$18 worth of equipment. The names of the camp robbers have been learned and the officers expect to round them up in a day or two.

A CLEAR COMPLEXION

Ruddy Cheek—Most Valuable
Says Dr. E. G.

Dr. F. M. Ed. scores of young men have written him asking for a few words of advice on how to get a clear complexion. Dr. Ed. answers that the only way to get a clear complexion is by using a good skin cream. He recommends a cream that is made of natural ingredients and is free from all harmful chemicals. He says that such a cream will not only clear the skin but will also keep it clear and healthy for a long time.

Entered as Post Office at Clearfield, Pa. as second class mail matter.

"Horsepower" is a word loosely used, but conveys the general idea that an engine of a given horsepower is capable of moving as heavy a load as a given number of horses.

Nothing is further from the truth, according to experiments made with an invention called the horse and mule dynamometer, devised by Prof. E. V. Collins, of the experimental engineering section of the Iowa State College of Agriculture and Experiment Station, at Ames, Ia.

If race and mule pulling contests were held recently at the Iowa State Fair and the teams tested developed all the way from 8.6 to 21.2 horsepower and exerted from 2000 to 2300 pounds tractive pull. The tests were the first of the sort ever made in the world. Horsemen who were present pointed out that Prof. Collins' invention would be of supreme importance in developing strains according to the pulling ability of sires.

Teams in the tests which developed a 2300 pound tractive pull exerted power enough to start and pull twenty-four tons of coal over a level track pavement of enough to pull six tons of coal over a similar track if once the loads were started.

With the Collins dynamometer, predetermined loads can be imposed on horses or mules for any required distance or time and pair after pair can be tested with absolute assurance that the load is the same. This has never before been possible, although much desired, for constructive breeders have realized that selection on the basis of performance was the sure and certain method of improving the draft qualities of horses and mules.

The Collins dynamometer is a device which is pulled by the horse or mule, and is the pull required to pull a load of a given weight in the ground. The tractive pull required to pull an ordinary walking plow in stubble, for example, six inches deep and fourteen feet wide, is about 400 pounds. In other words, the team does as much work as it would in pulling a 400 pound weight out of a deep hole in the ground.

As a tractive pull will move horses on other factors. To illustrate a demonstration load was made. A new farm wagon was loaded with grain weighing 8240 pounds, equivalent to 104 bushels of corn. This load, which, plus wagon weight, was 7720 pounds, of 3.86 tons, required on concrete pavement a tractive pull of 125 pounds, or 82.5 percent on black pavement, a tractive pull of 200 pounds, or 51.8 percent on aphalt, 300 pounds, or 77.7 pounds per ton, and on the dirt and cinder surfaced road where the pulling tests were being held it required 520 pounds, or 131.7 pounds tractive pull, per ton. These results, corroborated by other tests, show that it is easier to pull three tons on

a concrete road than one ton on a firm dirt road, and indicate, forcefully, the value of hard roads.

No final conclusions can be drawn from these first tests, but evidence brought out indicates that the value of weight has not been overemphasized by horse-users. The true pulling light teams were able to start nearly as large loads as the heavier pairs, but could not carry through, if a, could not pull the load the required distance. Furthermore, the tremendous effort they were obliged to make showed that they would soon be so exhausted that they could not start such a load. The heaviest city team—Cap and King, weight 3630 pounds—were able to start heavier loads than all but two of their competitors, and carried them more quickly, with fewer trials and with less exhaustion.

The team which tied them for first place and championship was game and true but barely made the distance. And Tom and Jerry, a still lighter pair, weight 3030 pounds, true and game in pulling, could not carry the load the required distance. They had the nerve, the will to pull and never quit, but the tremendous muscular exertion which enabled them to start and move the load a short distance could not be long maintained.

The practical value of the tests is very great. Farm and city loads once in motion seldom require more than 300 to 400 pounds tractive pull per pair, but to start such loads may require from 2000 to 1500 pounds, and a bit of bad roads may necessitate the expenditure of 2000 pounds tractive pull or more. The tests show that horses have such reserve power available that they can exert from six to ten times as much power for a short time as they ordinarily expend and that no harm results from the expenditure of such reserve power. This is why horses and mules are so valuable on farms and in the city.

Watt's definition of one horsepower laid down centuries ago, was approximately correct in measuring the energy which a horse can expend continuously throughout a working day; but he failed entirely to recognize the remarkable reserve power seasoned horses and mules possess.

When a single pair of horses—rated at two horse power—can exert over twenty-one horsepower it is obvious that they have a value far above their theoretical two horsepower. Above all other considerations, however, is the fact that we can now test draft horses and mules on a basis of performance, as dairy cattle or race horses are tested. No man would think of using a race horse unless he had demonstrated by actual performance that he had the bone and a new, conformation, constitution and courage to win; and in less than ten years draft sires will be selected for their draft qualities by the same rigid rule—they must prove by actual performance that they are best.

Progress Editorial For Women

LET DAD SET THE BRAKES

By FLORENCE DAVIES

The old boys got theirs the other day. It was at the International Convention of the Brotherhood of St. Andrew, in Chicago. One session was devoted to discussion of the youth of the present day, it being determined that something should be done to stop what was termed "the popular indoor sport of slaying the 'jazz-crazed' youth of today."

The keynote was struck by a delegate from Philadelphia who summed it up like this:

"Frankly, my brethren, I believe we largely are to blame. Twentieth century youth, charged in many quarters as about the most thoughtless, careless, most ungrateful and generally unregenerate lot the world ever has known, gives me no great worry. The present generation will outgrow most of the 'distemper' just as it did the croup, the measles and the mumps, if in the period of illness, it gets the right sort of treatment."

"The trouble with most boys is the fathers they have. A great many of us are far more interested in being successful business or professional men than we are successful fathers, and that is why we aren't satisfied with our boys, or with the present generation, that is why we wonder what is the matter with our churches and schools."

Well, if the "trouble" with most of the boys is the fathers they have, may it not be quite as true that the trouble with most girls is the mothers they have? Perhaps, if, as charged, too many fathers are too busy with business to guide their sons, women are too much engrossed in bringing up their daughters.

Fathers are dissatisfied with sons,

and sons with fathers—wives with husbands and husbands with wives. All are dissatisfied with all, and all unite to criticize the young. Age blames youth for the world's going out of joint, and youth blames that its elders put it out of joint. Who's to set it right? Is it to be the fathers and mothers, or is it to be the job? The age of criticism

first put on the brakes before it can hope to stop the mad pace pursued by youth.

Sometimes the son finds it a hard job to keep up with Dad, but if Dad doesn't slow down, Son, with the natural advantage of youth, will wind him and distance him in the long run.

So you can't beat the game, and as the Philadelphia delegate said, it's up to the fathers—and the mothers—to put the brakes on their own more or less reckless pace instead of keeping up this incessant shout against the follies of the younger set.

ICE—EX-SERVICE MEN

Special effort is being made by the division office of the United Veterans' Bureau at Pittsburgh, bringing before every ex-serviceman and woman some pertinent information regarding Government Insurance.

Ex-service man or woman, health, or if in poor health, service connected disability, totally and permanently disabled, may reinstate his or her Government Insurance. All Government Insurance must be reinstated in accordance with the provisions of the six forms of insurance offered by the Government on or before March 3rd, 1924, to the insured's interest.

Term Insurance is a permanent policy at the earliest possible date similar to standard policies of commercial insurance companies but are continued with the same manner as Term Insurance.

Interested may secure detail.

ed information regarding both reinstatement of insurance and conversion of Term Insurance to Government Converted Insurance by writing to L. C. Mengel, Insurance Cashier, United States Veterans' Bureau, Allegheny Building, N. S. Pittsburgh, Pa.

Caddis Fly Has Short Life.

The eggs of the caddis fly are laid on the surface of a river or stream, but they sink to the bottom before hatching. The fly is first born in the larval state when it is surrounded by what appears to be long white threads. These are its breathing organs. The larvae at birth are about three-quarters of an inch long. Immediately after birth it commences to build a covering protection for its body from the material nearest at hand. As soon as the fly's wings begin to appear it leaves the water for the dry land, where it finds a place in the sun to dry itself and unfold its wings. Then, quite unrecognizable as the larva that lived at the bottom of the river, it flies about the banks of the river to enjoy a short, but hectic existence.

ACCEPTED FINE POSITION

Charles Beahan, a Clearfield boy who has been connected with theatrical and movie profession in New York City for some time, and who is also a short story writer of ability, has accepted a position as scenario editor with the W. H. Hodgkinson Producing Co., one of the most prominent concerns in the movie world.

SENSATIONAL!

The veil of mystery hiding the narcotic evil ruthlessly torn away—the curtains of secrecy behind which the dope peddler, sneak fiendly flung apart—the land of drug darkness stabbed by a piercing ray of hope—a photodramatic searchlight that reveals to your startled eyes such an amazing array of astounding secrets that you will never forget them as long as you live.

SPECTACULAR!

A great city flung into a shapeless mass of crumbling ruins by the paw of THE BEAST before your very eyes—skyscrapers leveled like pasteboard boxes under your heel—a drug-crazed driver at the wheel of a pitching, plunging, tossing taxicab careening madly through a crowded city—an onrushing train—a shrieking whistle—a CRASH—and death to the head of the dope ring! Scores of revelers in a glittering ballroom—young girls coaxed with city tongues to "take a sniff of the white powder that smells like perfume"—a weakening resolve—more human wreckage.

STUPENDOUS!

IT THROBS WITH HUMAN INTEREST!

How to tell for sure—what oil your car needs

No. 9 in the series

Perhaps you own a Maxwell

If you don't own a Maxwell, cut this out and hand it to a friend who does

The late model Maxwell engines are designed with force feed lubricating systems in which oil is forced under pressure to the three main bearings. Holes drilled in the crankshaft carry the oil under pressure from the main bearings to the connecting rod bearings. The other moving parts are lubricated by the oil mist which is created when the oil is forced out through the close clearances at the ends of the connecting rod bearings.

The oil circulating pump is of the impeller type and is located at the camshaft level, drawing its supply through a pipe connecting with a strainer in the oil reservoir.

Aluminum pistons of the constant clearance type are employed. The skirt or bearing part of this type of piston is slotted on one side to provide for expansion under heat and therefore permits the use of close clearances. In addition, horizontal slots are cut through the piston below the lower ring to permit the free return of oil from the cylinder walls.

With the effective control of the oil supply which is secured by this oil return provision on the pistons, the possibility of carbon formation is minimized. In addition, the characteristics of aluminum as a piston material tend to prevent the fuel knock which often occurs when carbon deposits accumulate.

Where natural circulation of the cooling water (thermo-siphon system) is employed as in the Maxwell design, it is desirable to use in warm weather an oil which is suitable for fairly high operating temperatures. Such an oil will be thoroughly atomized and distributed by the Maxwell lubricating system under the conditions of summer operation.

To assure circulation of the lubricating oil in cold weather, the use of an oil which flows freely at low temperatures is necessary because of the elevated location of the oil pump with its long connection to the oil reservoir.

To meet correctly these and other important lubrication features of the Maxwell design, we recommend for the 1922 and 1923 models, the use of Gargyle Mobiloil "A" in summer and Gargyle Mobiloil Arctic in winter. For the 1921 and earlier models, Gargyle Mobiloil Arctic should be used both summer and winter.

Next Friday, we will tell you about the Correct Lubrication of your Ford. Watch for this.

"HOGGING OFF" CORN SAVES LABOR AND MAKES PORK

With the existing shortage and high price of farm labor, many farmers of Clearfield County are making plans to "hog" on part of their corn crop this year. Practical experience and tests at experiment stations have proved that harvesting corn by this method is not only a labor saver, but is also a means of getting the high dollar for corn.

"Allowing the hogs to harvest the corn crop is no longer considered a wasteful practice but rather is to be highly recommended if a few simple precautions are followed," remarks Doctor H. H. Haver, head of animal husbandry extension work at State College. "Don't turn hogs in until your corn is ready to cut and shock. Remember that shell well is what you want the hogs to work on."

Ordinarily, seven or eight 125-pound shots will harvest an acre of corn, according to Haver. He figures that it takes about three acres of good corn to finish twenty-five shots to an average market weight of from 185 to 200 pounds. It is a good plan to turn into a limited area, say an acre, and let the "harvesters" clean this up before providing more. Successful hog raisers find that woven wire stretched along the corn row is enough to hold the "hoggers" in a portion of the field. It is well to accustom the hogs to the corn before turning in by cutting up the stalks and feeding them for a few days.

Don't forget the clean, fresh water and a protein supplement is Haver's caution. "A high grade tankage, fed at the rate of one-fourth pound per pig daily makes a good ration with corn. The tankage can be mixed with a little water and fed as slop, or be mixed with shorts and water as a feed."

Indiana County Raises First Litter Of Pigs To Weigh Ton at Six Months

The first litter of pigs in Pennsylvania's Ton Litter Contest to weigh 2,000 pounds at the age of six months was produced by Roy McElroy of Indiana County. The ten piglets in the litter weighed just 2,140 pounds with the heaviest pig tipping the scales at 246 pounds and the lightest at 191 pounds. Many litters in different counties of the state are entered in the contest which is being supervised by the agent and extension department at the Pennsylvania State College.

BERKSHIRE FIELD DAY AT PA. STATE COLLEGE OCT. 26

Several Berkshire breeders of Clearfield County are planning to attend the "State" Berkshire Field Day which will be held at State College on October 26 and 27. The event opens on the evening of the 26th with a dinner for the breeders followed by a program of talks by men prominent in the swine industry.

The next day will be spent in touring the hog plant and College Farm. A same judging demonstration and a talk on hog house construction are special features of the day.

Of great interest to the Berkshire men will be the carload of Berkshires that are being fitted by the college for the International Livestock Show at Chicago. About one hundred pigs were sent to the College last spring by breeders in all parts of the state. From these will be selected a carload to represent the Pennsylvania breeders of Berkshires at Chicago. Each man will have an opportunity to see the progress made by the pigs he contributed to the lot.

TREATING STOCK FOR LICE

Horned or cattle afflicted with lice can be treated by dusting with a powder made of one part redium fluoride and five parts wheat middlings or other inert powder. Care should be taken

EVERYTHING SET FOR SYRACUSE

Recent reports from headquarters at Syracuse claim that at the close of making entries, over fifteen hundred pure bred cattle from almost every State in the Union, besides other countries of the world, will be present for the judge to pass his decision upon. Pennsylvania alone will have over one hundred pure bred animals at the Show, as well as some two or three hundred high grade animals with Cow Testing records back of them.

The County Agent, with a party of dairy farmers, left Monday evening to take in the Show. It is to be regretted that conditions prevent more of the dairymen from attending this Show, as it is unquestionably the best Dairy Show of its kind ever staged in America, and an opportunity of a life time for the dairymen to see the best individuals of the different breeds, as well as the most up-to-date methods and machinery used in developing and manufacturing the dairy products.

MANY HENS FAIL TOPAYFOR MEALS FARMER GIVES 'EM

Does the average hen in Clearfield County pay for her meal ticket? Judging by the egg production of the average hen in Pennsylvania, which is seventy-five eggs per year, many farm flocks do not pay for their keep.

A hen consumes about eighty pounds of feed in a year, costing about two dollars. Seventy-five eggs sold at the usual market price bring about two dollars a year. This means that the hen scarcely pays for her feed, not to mention labor depreciation of buildings, and interest on the investment. The seventy-five egg hen, then, is a "star boarder."

How can farmers of Clearfield County bring this average egg production up to one hundred and fifty eggs per year where a profit will be realized?

The answer is "feed, weed and breed" according to L. W. Steepleman, poultry extension specialist at the Pennsylvania State College. "Feeding means more than simply throwing corn or oats to the flock. It means the systematic feeding of a combination of scratch feed, mash, green feed, water and grit."

As a scratch feed Steelman recommends a mixture of one hundred pounds of cracked corn, one hundred pounds of wheat and fifty pounds of oats. For mash, he suggests one hundred pounds of corn chop, two hundred pounds of ground wheat, one hundred pounds of oats and one hundred pounds of meat scraps.

Even with the best feed, Steelman points out that some hens will not lay. That is where weeding or culling comes in. He advises culling the flock once every week or two during May, June, July and August.

Breeding, according to this poultryman, includes the selection of high producing, typical hens in October and November whose eggs are to be used for hatching purposes. Then mate these hens with a typical pedigree male bird. Eggs picked at random from the produce of the entire flock will not result in flock improvement.

Not to get the powder into the eyes or on mucous membranes and not get too much on one animal, one pound being sufficient for five animals. In warm or moderate weather, spraying animals for lice is preferable.

County Agent, R. H. Engle, Erie, Pennsylvania.

County Growers Can Join "400 Bushel Potato Club"

Will there be any potato growers in Clearfield County who produce four hundred bushels per acre this year? If so, they will be eligible for life membership in the "Four Hundred Bushel Potato Club" which has been organized in Pennsylvania to stimulate potato improvement and more economical production.

A gold badge will be awarded to growers qualifying for membership. The badge is in the form of a Keystone with a potato in the center and the figures "400" above it. Encircling the potato is the phrase "potato improvement club." The man's name, the yield per acre, the year, and the variety will be engraved on the back of the badge. The Pennsylvania and Maryland Joint Stock Land Bank of Harrisburg, through its president, Fred Rasmussen, is donating the

POULTRY SHOW AT STATE COLLEGE OCTOBER 18, 19, 20

The first standard production Poultry Show of Pennsylvania will be held at Pennsylvania State College, October 18th, 19th and 20th, under the auspices of the Penn State Poultry Club and the Pennsylvania State College Poultry Department. This show will give the utility man an opportunity to compete on the merits of production rather than show type.

There is a need for such a Show, since the State of Pennsylvania has always been among the first in the production of poultry and eggs. As years have passed, many of the Pennsylvania poultrymen have developed birds of high egg and meat production ability. There are hundreds of such birds in our State, but never before have the owners of such birds had an opportunity to place their birds in a State Wide Competition of this nature.

Entries for this Show will close October 18th, and all exhibits must be in the Show Room by 12:00 P. M., Wednesday night, October 17th, as judging will commence immediately at 10:00 A. M., Thursday, October 18th. The Show Room will be open to receive exhibits Tuesday, October 16th. All birds will be fed and cared for at the expense of the Club. Entry fees will be twenty-five cents for each single entry and one dollar for pen entries. The latter consisting of one male and four females. All shipping charges must be prepaid. All entries must be made upon the regulation blanks furnished by the Secretary, and all entry fees must be paid in full when they are made.

There will be a public auction of cockerels at 1:00 P. M., Friday, October 19th. These birds have been bred and reared on the College poultry plant. They are all fine husky fellows, taken from the best flock owned by the College. If you cannot come yourself to buy one or more of these fine breeders, arrange with a fellow poultryman to buy one for you, or send in sealed bids to the Secretary of the Show.

The County Farm Bureau has a limited number of Premium Books in the Office, which can be had upon request. Also further information can be obtained either from the Farm Bureau, or by writing direct to Leon T. Lepp, Secretary of the Penn State Poultry Club, State College, Pennsylvania.

The Fall Duties On The Farm

By DONALD MCK. GRAY.

The old hens, in many cases, have begun to molt heavily and all the culls have been disposed of. It is now time to select the breeding flock for this next spring. The real late molder that is laying heavily and shows by her light shanks that she gave a good account of herself is the bird that falls in this class. If she has laid a large number of good sized eggs she will generally have a broad flat back and a deep full breast. The head should be clean cut and the fowl should show every indication of vigor. Discard all birds having any standard disqualifications. Great care in selection will be well paid for in the winter egg production. These good old birds will soon go into a molt and it will be necessary for them to grow new feathers as well as put back in their bodies some of the elements needed to make hatchable eggs. While little is known about feeding the breeding hen, most of the poultry men feel that it is essential to give them at this time green food and plenty of milk. The green foods that are so desirable are cabbage, alfalfa, clover hay and sprouted oats. Provide the old flock with an ample run where they can get out in the sunlight and exercise.

The pullets certainly deserve some consideration as we are going to depend on them for the early winter eggs. Here it is well to proceed cautiously. There is a tendency for many of the farmers to be "penny wise and pound foolish" by bringing the young birds into laying before a big frame is built and enough flesh is stored on the body. This serious mistake can be avoided by taking away the beef scrap two or three weeks when the birds begin to show signs of coming into production. Place the pullets in their winter quarters before they start to lay heavily for if they are moved after they get well under way production is liable to be checked.

NEGLECT RUINS PULLETS THAT LAY "GOLDEN EGGS"

A common practice among farmers at this time of the year is to be busy with other farm work and neglect the care of pullets which are to lay the "golden eggs" this fall. Frequently, these birds are fed too forcing a food and come into laying too soon.

"Just as soon as the pullets begin to 'bud' out with a red comb and red wattles, take away the protein feeds such as milk or meat," is the advice of a veteran Clearfield county poultryman. "If possible, separate the advanced maturing birds from the rest of the flock, giving them plenty of free range, and abundance of green food, and all of the corn and wheat they wish."

When these birds have a good frame, have developed a good size and have a surplus amount of fat on their bodies, he suggests giving them the protein feeds again and let them begin laying. Ordinarily, it is advisable not to let Leghorn pullets lay much before five and one-half to six months and pullets of the heavy breeds six and one-half to seven months.

ed, which is apt to be followed up by that much dreaded fall molt.

It is absolutely foolish for us to feed a lot of lice, mites and worms when a little care at the time of confinement will eliminate these. If the birds are at all lousy when handled, treat them with sodium fluoride. Seven or eight pinches applied to the major sections of the body will kill all of these pests. The scaly leg mite is another enemy which can be annihilated at this time. An application of a mixture of equal parts of raw linseed oil and kerosene will give the desired results. The long round worm which causes much havoc in the chickens' intestines can be killed by incorporating ground tobacco stems in the mash. The Extension Service will furnish, if needed, detailed information concerning the eradication of this pest. The red mite should be hunted out and killed by a good spray. Before this is done, however, the old litter and filth should be removed from all the pens. The walls should be swept down and the floors scraped. If the floor is dirt, remove and renew the surface. The windows should also be cleaned at this time. They were packed there to admit light and are defeating their purpose when we allow them to become fogged with grime. New coat the interior of the house with a good spray, being sure all the cracks and corners are reached. Go over the roosts with a good perch paint, slapping it well into the joints. The building should be made draft proof by plugging up the cracks in the rear and side walls and by providing solid partitions every twenty feet. New muslin on all the window frames, a piece of tar paper here and there and one or two nails will usually complete the operation of starting off on a prosperous poultry year. We will now have a flock of well selected clean hens, stowed away for the winter in dry, warm, sanitary quarters.

COCKLEBURS POISON HOGS

Cockleburs cause serious loss by poisoning hogs. They are very deadly just after coming through the ground and while still in the two-leaf stage. They are often the first thing out in the spring and hog men turn greedily with the result that a bad inflammation is set up in the kidneys and bladder, causing quite sudden death, due to uric acid poisoning.

Examine your pastures for cockleburs and if found, keep your hogs elsewhere until the burrs have passed the two-leaf stage. After that they are not palatable, neither are they as poisonous.

FIND 130 "BOARDER COWS" IN ONE MONTH

Additional proof that cow testing pays is contained in the May reports of twenty-three Pennsylvania cow testing associations, which show that one hundred and thirty unprofitable cows were culled out as "boarders" from the total of 7,421 cows tested, according to an announcement from the Clearfield County Farm Bureau Office.

The cost of milk production is being lessened daily by the hundreds of members of cow testing associations. One farmer reports one hundred per cent increase in production through the adoption of balanced ration feeding methods recommended by his tester.

Of the total number of cows tested in the month, 1389 were reported as giving over forty pounds of fat and 1431 cows with over 1000 pounds of milk. In the higher production class, 447 gave more than fifty pounds of fat and 815 gave more than 1200 pounds of milk. A year ago Pennsylvania ranked second among all states in the number of cow testing associations, and still holds a very high rating in this respect.

SORTING OF APPLES BY TABLE MACHINE IS VERY SATISFACTORY

A simple and efficient sorting table has been devised for the apple grower who does not have enough fruit to warrant the purchase of a mechanical grader. This table will pay for the cost of construction many times over in a single season and is displacing the old inefficient and back-breaking method of grading apples out of a pile, basket or crate.

Extension fruit specialists at State College find that two types of sorting tables are being used in the state. The simple form which is well adapted to sorting into bushels or crates, is a rectangular table, eight feet long and four feet wide, supported at the corners by legs and covered by canvas or burlap. The frame is of two by four material. The table is light and is carried from tree to tree, the picked apples poured directly upon it, and the grading done at once.

A second type of sorting table that is meeting with satisfaction where apples are packed "tree run" is built about the same length, eight feet, but is four feet wide at one end and tapers to about a foot at the other. The sides are made of one by six boards and the bottom is slatted to allow the leaves to fall thru. By mounting this table with the narrow end a trifle above the barrel and the wide end six or eight inches higher, the apples will run toward the narrow end.

A strip of burlap or canvas is tacked to the lower end of the table and is drawn over the barrel top loosely. The operator stands or sits behind the barrel and as the apples pass from the table on to the apron, he removes the defective fruit. When the apron contains about a half bushel of fruit, it is lowered carefully into the barrel and emptied. The barrel is then shaken and the operation repeated.

PUREBREDS SUPPLANT SCRUBS

From a county of "pnev woods rosters" to a county filled with prebred hogs in four years is what has happened to the swine industry in Ware County, Georgia. Four years ago there were only three small breeders of purebreds in the County. This year it is believed that ninety per cent of the hogs marketed will show the result of purebred influence and that the number of hogs in the county will be more than doubled.

Demonstrations in club work have resulted in selling the purebred idea to practically all farmers of the county. Not only have every Pig Club member made money from his hogs but the fathers of the boys seeing the larger weights and bigger profits obtained, are killing the scrub stock and replacing it with purebred.

County Agent, R. J. Heyde, Waycross, Georgia.

WHEAT IS A GOOD STOCK FOOD SAYS THE FARM BUREAU

Although wheat has seldom been used as livestock feed in Clearfield County, many farmers are making preparations to feed some wheat, especially the poor grades, if present prices continue.

"What can safely be substituted for either corn or barley without affecting the value of the ration," is the statement issued by the Farm Bureau Office. "It should be ground and fed with oats, barley or other better feeds. Fed alone, it is likely to cause trouble by forming a sticky mass in the animal's stomach."

Experienced hog raisers found that wheat may be substituted for corn or barley in a ration rich feed such as tankage or skim milk. It is advisable and increases the food value twenty per cent.

Ground wheat is being successfully used to feed cattle may be used for the fattening of the calves and for the fattening of the calves. It is a safe feed when fed in moderation to horses due to the fact that it is a skilful emulsion that is likely to arise.

Dairymen should not make the mistake of trying to substitute wheat for bran in feeding dairy cows," is the caution of the Farm Bureau. "It is a substitute for corn in the ration and is a bulky feed such as bran or corn to lighten up the mixture. When both corn and wheat are in the corn and cob feed, the ground together makes more bulk."

Good Egg Production Requires Right Kind Of Housing For Winter

With the winter season approaching, poultrymen, and in some cases poultrywomen, of Clearfield County are making preparations for the winter housing of their flock. Experience has shown that the old poultry house should be emptied for a week and thoroughly cleaned and disinfected before the young pullets are put in for winter quarters. It has also been demonstrated that the pullets should be brought into the laying house before they begin to lay. A change in quarters after egg production has started is likely to produce a fall molt.

Well ventilated and dry houses are necessary for healthy and maximum production and are likely to result from raising birds from the ground. Old poultrymen state that a bird should have from five to five square feet of floor space. They claim that, regardless of the case, a flock will not lay to sixty per cent egg production if it is crowded.

COSTS \$101.99 TO KEEP COW

Based on present prices, the cost of keeping a cow one year (exclusive of labor for milking) is \$101.99. This is for a cow that before you bought her cost \$101.99 worth of feed, plus the cost of her labor for milking. The pleasure of a cow milking her twice daily is a great thing to her and best of all, she does not work, so the "beef" the cow does not pay for her keep?

Find out what your cow is doing by weighing her. If she cannot afford to lose weight, she is a poor cow. If she is losing weight, she is a good cow. The cow and the farmer should work on the local County Agent, J. H. Plattsburgh, New York.

ORDINARY RAISING OF HOGS

Our most important livestock problem is the management of hogs.

Why is it that only a few farmers grow two hundred or fifty pound hogs by November? Why is it that a great many farmers raise only an average of three to four pigs per sow? Why do about half the pigs on so many farms refuse to become thrifty even on the best of feed? What causes so many runts? What is responsible for the many inquiries relative to worms, bull-nose, typhoid, canker, sore mouth, unthriftiness of pigs, etc? Some say: "I had hard luck with my pigs." Is it hard luck? The real answer is filth and parasites have been doing deadly work, as has been proven.

Four Generations of Mountains.

The great changes that the earth undergoes may be judged from the fact that four times since geological history began new generations of mountains have risen in Europe and there is no reason to suppose that it will not be another Indian day.

TO SPEAK AT OSCEOLA

Hon. W. I. Swoope will be the speaker at this evening's Commercial Club meeting at Osceola. Congressman Swoope will speak on the subject "A Citizen's Duty."

Cows Eat Codfish.

In Norway the heads of codfish are mixed with marine plants and given to the cows to increase their yield of milk.

BIG INCREASE IN PUREBREDS

Seventy-three per cent of the dairy bulls in Green Lake county, Wisconsin, are purebred, whereas three years ago only thirty-seven per cent of the dairy sires were purebred. This increase of nearly one hundred per cent has been brought about by persistent organized effort in breed promotion work.

Why take the risk?

MANY have found by their own experience that coffee's effect is harmful. Health authorities warn against risking the growth and development of children with the drug element in coffee.

Why take chances with your health, and thus risk comfort, happiness—success?

There's both safety and satisfaction in Postum as your mealtime drink. You'll thoroughly enjoy its delightful flavor and aroma. Postum contains nothing that can harm you. As many cups as you like at any meal—with no penalties to pay in wakeful nights and daytime dullness.

Your grocer sells Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer the flavor brought out by boiling fully 20 minutes. The cost of either form is about one-half cent a cup.

Postum FOR HEALTH

There's a Reason

A Tower Of Strength That Stood Foursquare To All Winds That Blow---Tennyson.

The shrewd investor interviews his banker before he ever invests a cent. He does that because it is the bank's business to know good investments.

Investing money in GOOD CLOTHES is as important as buying a gold bond. It is our business to advise you so that your money brings the greatest return.

Let us be your banker in GOOD CLOTHES—we stand four-square to all winds that blow.

The Coziness Appeals To Everybody

The coziness of the open fireplace and the general goodness of the home cooking is what the people of Clearfield are looking for. The coziness of the open fireplace and the general goodness of the home cooking is what the people of Clearfield are looking for.

Harlequin Tea Room

Wined Out Conquered Rites. The Christian on a quest of France is perhaps the greatest of all his story. Conquers usually leave some small remnant of their vanquished foes. A few Indians still manage to hang on in the United States, east of the Mississippi in spite of the numerous superior race of white men all about them. No Americans were left in France. The Christians exterminated them like beasts—men, women and children alike and cleared the land for the foundation of modern civilization.

WOMAN SICK TWO YEARS

Caused by Troubles Women Often Have—Relieved by Lydia E. Pinkham's Vegetable Compound

Medina, N. Y.—"I had a great deal of trouble such as women often have, and this effected my nerves. For over two years I suffered this way, then I read in the Buffalo Times about Lydia E. Pinkham's Vegetable Compound and have taken it with very good results. I am very much better and feel justified in praising the Vegetable Compound to my friends and neighbors who suffer from anything of the kind."—Mrs. Wm. H. ADAMS, 311 Lin Road, Medina, N. Y.

Feels Like Girl Sixteen. Rochester, N. Y.—"After my twin girls were born I was all run-down. My neighbors thought I was going to die. I saw your advertisement in the paper and bought Lydia E. Pinkham's Vegetable Compound. The first bottle helped me and I kept on taking it. I only weighed ninety pounds when I began taking it, and I have gained in weight and feel like a girl sixteen. I never can say enough for Lydia E. Pinkham's Vegetable Compound."—Mrs. NELLIE DORRY, 16 Skuse Park, Rochester, N. Y.

Shur-on SPECTACLES & EYEGLASSES

The most dangerous of all eye troubles is that which is caused by the wearing of cheap, ill-fitting spectacles. Shur-on spectacles are the only ones that will cure this trouble.

Individuality—how often it depends on appropriate spectacles and eyeglasses

DID you ever try to analyze individuality? Sometimes, no doubt, it is explained by clothes of fashion's late vogue. Perhaps it means that each costume suits the occasion to a nicety. But how often it depends on the spectacles!

For spectacles and eyeglasses must agree with face, costume and occasion. And they can, quite easily, if you let us fit you with the correct spectacles and eyeglasses for sport, for evening functions and for afternoon. Thus you can be not only authoritative but the utmost in scientific precision.

The Formula for Eggs

Conkey's Buttermilk Laying Mash and Conkey's Scratch Grains for eggs body maintenance and exercise—that is the Conkey way of feeding. Hens prefer scratch grains to mash if given a choice, but it is the mash and not the grains that makes the eggs. Arrange to feed so the hens will consume twice as much mash as grain by measure.

Conkey's Buttermilk Laying Mash

Balanced egg-making ration just right in animal protein (needed for eggs) and low in fibre (indigestible waste matter). No mill sweepings, shell, alfalfa, ground hay or trashy filler. All nutritious feed—clean and sweet.

Conkey's contains wholesome meat scraps, granulated bone, grains ground to proper fineness, and fresh concentrated buttermilk. We use Semi-Solid Buttermilk only. Mixed with exacting care and scientific accuracy, it gets remarkable results in a perfectly natural way, without ruinous artificial stimulation. It is Nature's balanced egg-maker.

Insist on Conkey's—in Original Packages

For best results, feed all three Conkey Buttermilk Feeds—one each for Starting, Growing and Laying. Don't break the Chain of Conkey's Original Buttermilk Feeds. Ask for Conkey's and always get in Original Packages. Big Poultry Book Free. Ask for it.
